

LIFT PIN INSERTS

- Lift inserts are a single injection molded part, not two pieces solvent or sonic welded together. This insures a water-tight and vacuum-tight part.
- Outside rings to insure no infiltration or exfiltration along the outside of part.

Easy to install:

- Standard lift insert fits on to locating pin inserted through collar attached to outside of form. For use with wet and dry cast method.
- Breakaway lift insert fits into locating ring attached to outside of form. Collar breaks off during stripping of product. For use with wet cast method.
